

# HRS PatientConnect® and Eko DUO

## Incorporate the specialist into the telehealth program with Eko DUO

The Eko DUO captures **heart, lung sounds**, and **ECG**, providing the fastest and most comprehensive view of the patient's **cardiopulmonary function**.

Eko DUO provides quick, accurate, and user-friendly screenings at the point of care, through a **virtual visit**, or from the **patient's home**.\*

- ✓ Single Lead ECG
- ✓ FDA cleared and HIPAA compliant
- ✓ 9-hour battery life
- ✓ Digital Stethoscope
- ✓ Pairs wirelessly with HRS devices
- ✓ Automatically powers off after 5 minutes of inactivity

\* Requires Android 8 software or newer.

## How does the integration work?

1. The patient uses the ECG, the stethoscope, or both, to record their cardiopulmonary function. This can be done in-person with the field clinician or remotely.
2. The ECG or stethoscope reading appears on the HRS tablet in real-time. The patient or field clinician submits the reading.
3. The reading is sent directly to the HRS clinical dashboard, ClinicianConnect®, for the specialist to evaluate.

**HRS**

Health  
Recovery  
Solutions

Ranked #1 by KLAS for Remote Patient Monitoring in 2020 and 2021, HRS empowers the nation's largest providers and payers to deliver advanced telehealth and RPM solutions, improving patient satisfaction, reducing readmission, and optimizing clinician workflow.
